

Vibratory Settling Platform for Filling System

Vibratory filling platform (Vibratory Settling Platform) is used in “Flexi Packaging System” for compacting of the kernels within the pouch to reach all corners while filling before taking it into the vacuum sealing machine. This helps the bag to contain the quantity and maintain the perfect shape after packing. This is pedal activated and powered by a special vibratory motor.

Method of operation	: Manual , Pedal Activated
Power	: 1 HP / 415 V / 3 P
MOC	: MS powder coated
