

## Bulk dispensing system-A steady stride

The all new GW-75 Gross dispensing system from Sepack is packed with whole lot of unmatched unique technical features never offered in the industry with refreshed and trendy looks. The ergonomic & compact design allows the equipment to be used for a wide range of granular sizes from the finest to the moderate sizes, without compromising on filling accuracy & speed.

GW-75 series gross dispensing machines are used for bulk filling/dispensing of finest granular products to moderately bigger granular products from a quantity of 10 Kgs.-75 Kgs. This system has inbuilt modules like (a) Bag clamping device, (b) Load cell, (c) Control electronics & user interface.

This series of gross dispensing system can be easily incorporated to an existing storage, with the help of a simple interfacing flange makes it easy for companies as they don't require spending valuable money on supplementary feeding lines. The machine is pneumatically activated.

The new design is effectively blending gravity bulk and moderate feed gates and fine vibratory feeder for better speed, accuracy and brings versatility to the equipment. In short, the new GW-75 gross weighing system is a simple on top solution for bulk of granular products.

| Suitable for multiple granules sizes | Best in class, speed and accuracy | Easy installation and maintenance
